Foreword

This Namibian standard, NAMS 0002:2018 – Standard regarding the marketing and commercial quality control of Grapes in Namibia is a new Namibian developed Standard. The Namibian Standards Institution Subcommittee on Horticulture products (TC3/SC3) is responsible for the development of the Standard

The Namibian Standards Institution (NSI) is Namibia's National Standards Body (NSB) responsible for coordinating all standardization and quality assurance activities in the country and represents Namibia at regional and international standardization bodies. The work of developing; adopting and amendment of National Standards is normally carried out through NSI Technical Committees. Each organization or individual interested in a subject for which a technical committee has been established has the right to be represented on that committee, being public or private sector organizations

Namibian Standards are drafted based on NSI Standards development procedures in accordance with the rules given in the International Organization for Standardisation/International Electrotechnical Commission (ISO/IEC) Directives 1, ISO/IEC Guide 21-1 and World Trade Organisation/Technical Barriers to Trade (WTO/TBT) Code of Good Practice. The main task of technical committees is to develop; adopt and amend international or regional standards. Draft Namibian standards developed by the technical committees are circulated to the relevant stakeholders for voting. Publication as a Namibian Standard requires approval by at least 50% of the committee members casting a vote. Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. NSI shall not be held responsible for identifying any or all such patent rights.
