## **Foreword**

The Namibian Standards Institution (NSI) is the National Standards Body (NSB) responsible for coordinating all standardization and quality assurance activities in the country and represents Namibia at regional and international standardization bodies. The work of developing; adopting and amendment of National standards is normally carried out through NSI technical committees. Each organisation or individual interested in a subject for which a technical committee has been established has the right to be represented on that committee, being governmental and non-governmental organisations

Namibian standards are developed based on NSI Standards development procedures in accordance with the rules given in the International Organization for Standardisation/International Electro technical Commission (ISO/IEC) Directives 1, Procedures for TC work; ISO/IEC Guide 21-1 Adoption of international standards as regional or national standards and WTO – TBT World Trade Organisation code of Good Practice (which is published as Annex 3 in the TBT Agreement) I

The committee responsible for this document is the National Electrotechnical Committee (TC) on Electrotechnical related standards.

This edition NAMS/ESI 002: Ed 1.0 04-2021: Part B-05: Underground Distribution Cables is a first edition developed.
